AREAS FOR DISCUSSION

Background

1. Active Travel Task Force
   - Welcome for the task force
   - Timescale/urgency of recommendations

2. 2020 10% cycle-usage ambition
   - Cycling levels roughly static (up in some areas where there is investment, down in others)
   - An evidence-based ambitious target based on guaranteed consistent annual funding is needed (such as 15% by 2030, based on £20 per head consistent funding).

Barriers to ambitious local projects

3. Central government cycling/active travel investment
   - Only sufficient for one or two ambitious CL+ schemes per year in whole of Scotland
   - Far below levels of successful European cycling cities, and in the past was year-by-year
   - Funding not only enables schemes, but shows the level of political priority for cycling

4. Staffing & design
   - Insufficient expert staff time availability in many councils
   - Consultants can help but significant council high-level input essential
   - Designs must be bold to ensure maximum support (and then use) by cyclists
   - The new Cycling by Design must be high quality and apply to councils, not just trunk roads
   - Modelling must include benefits to all, including health, etc.

5. Local opposition
   - Very serious issue – e.g. Ayr, Bearsway, Roseburn
   - Need extensive early publicity/consultation on the actual impacts, which again means significant staff time, and high-level political support
   - Some people may be disadvantaged [e.g. loss of parking/loading]; it must be shown clearly how the advantages outweigh this, so as to gain wider public support.

6. Local councillors
   - Councillors can be very susceptible to strong locally-based 'anti' campaigns
   - They will be helped by a strong Council and Government political lead which is exemplified by government investment in the local authority for schemes which are bold
   - Strong manifesto commitments help ensure councillors stay on side: e.g. 10% of transport budgets, as previewed for Glasgow SNP and Edinburgh Labour & Green manifestos.
   - Give councils greater responsibilities to ensure safer streets and cleaner air.
